Lecture => 9 Function

```
function myfn() {

}
```

↳ we can store function in a variable also.

Rest parameter in function

```
function addNum(...nums){
    let sum = 0;
    for(let n of nums){
        sum += n;
    }
    return sum;
}
```

Another way to make function
Arrow function

```
const sub = (a,b) => {
    return a-b;
}
```

IIFE => Immediately Invoked Function expression

```
( function() {
    console.log("hello world");
})();
```

Call back

```
function greet() {
    console.log("hello world");
}

function meet(callback) {
    console.log("how are you?");
    callback();
    console.log("goodbye");
}

meet(greet);
```
